The Fourth International Symposium on Atopic Dermatitis, held on 26th-29th May 1991 in Bergen, Norway, followed the third symposium held in Oslo in 1988. In the intervening years, much energetic work has been carried out all over the world in the field of atopic dermatitis and new and stimulating information was presented at the fourth Symposium. All the papers read are included in this volume, with the exception of those already published elsewhere and those not submitted by the deadline date. Poster abstracts are also included in this volume.

Apart from minor linguistic corrections and amendments, the manuscripts appear here in the form as submitted.

We hope readers will find this collection of papers interesting and instructive; they represent many of the advances achieved in recent years in research into and clinical aspects of this disease which continues to spread throughout the world and which still poses many unsolved questions.

I wish to thank the following Japanese drug companies who gave financial support to the editing of this volume:
